

ABSTRACT OF THE DISCLOSURE

An integrated computer and computer kiosk in which the component parts of the computer are mounted directly to the component parts of the kiosk, thereby minimizing assembly costs and weight. The kiosk includes a base, a back plate, one or more
5 computer components mounted to and in direct contact with the back plate to facilitate heat transfer to the back plate and base so as to dissipate heat. A touchscreen is also mounted to the back plate in a manner that facilitates the transfer of heat from the touchscreen to the back plate with the one or more computer components positioned between the touchscreen and the back plate. A housing is mounted to the base plate to
10 enclose the computer components.
